Listing Component:

- fields: Heading (plain text), Backgroud Color (drop-down selector: Light Blue (default), Light Gray, option to add more colors in the future if desired)
- Fields for a fixed number of Job Cards (8 max)
- Each Job Card will contain : Job Category (plain text), Job Title (plain text), Job Link (link), Location (plain text), FTE (plain text), Date Posted (date picker)
- The main component Heading will display centered horizontally
- Job Cards will be manually populated for initial implementaiton. Future roadmap considerations for integration with iCIMS.
- The Date Posted field will be used to calculate and display the number of days the job has been active (Example: "Published 2 days ago")
- On Desktop, navigational arrows will display to move ledt/right through the carousel. If less than 3 Job Card items are populated in the carousel, no navigational arrows will display on desktop. On Mobile, the navigational arrows will not be displayed.
- Both Desktop and Mobile will also display "dot" indicators below the cards (centered horizontally). These are not clickable, but merely visual helpers to the user.
- On Desktop, the first 3 Job Cards will display. If only 3 Job Cards are published, the "dot" indicators will be hidden. If 4 or more Job Cards are published, the "dot" indicators will display as follows: the first dot represents the first 3 cards. One additional dot will be displayed for each additional Job Card. Example: 5 published jobs would display 3 "dots"
- On Mobile, the first Job Card will display. One "dot" indicator will be displayed for each published Job Card.
- Carousel will support swiping to move through the carousel items on mobile
- On Desktop, the mouse hover action will animate the tile background color to white (text colors do not change) and increase the card size by a small percent. *the increased size should not cause other visible cards to shift in any direction.
- On Mobile the Job Card displaying on screen will be shown with the white background. Additional cards will be primarily out of view, with only the outline edges of the cards visible to help the user know they can swipe left/right.
- In both Dekstop and Mobile, the entire Job Card is clickable and will link to whatever link has been set by the author. The Link field should support external and internal links.
